Lab Tasks

TASK 01

A medical clinic keeps records of patients, doctors, and appointments. Patients visit doctors for consultations, and appointments are scheduled in advance. Doctors treat patients and manage their daily schedules. Each patient may or may not have medical insurance, and the clinic needs to record this information. The clinic building also contains a waiting area, cafeteria, and security office, which are not managed by the data system.

1. Identify the entities in the system.
2. For each entity, list appropriate attributes (minimum 4).
3. Assign a suitable data type to each attribute and reason (why this type?)
4. Identify non-entities and explain why they are excluded.

TASK 02

A university hostel manages residents, wardens, rooms, and maintenance complaints. Residents are allotted rooms and may submit complaints related to electricity, water, or furniture. Wardens supervise hostel activities and handle disciplinary matters. The hostel also has a mess hall, TV lounge, parking area, and garden, which are part of the building facilities.

1. Identify the entities in the mini-world.
2. Identify the non-entities.
3. Justify why each item is included or excluded.
4. For each entity, list appropriate attributes (minimum 4).
5. Assign a suitable data type to each attribute and reason.
